The most important advance in fly control since the swatter!

FLY-KATCHER will locate night and day in any well confined area. However, its effectiveness and range are determined by the amount and type of artificial lighting in the control area. Placement should be near the windows or doors frequently opened during the day.

Under favorable conditions, FLY-KATCHER will control flies in an enclosed area of up to several thousand square feet. However, additional units may be required for areas with a severe fly problem.
